SENIOR SOFTWARE ENGINEER

Leonardo Sarmento de Castro

São José dos Campos, São Paulo — Brazil 🇧🇷

Senior Software Engineer with 10+ years of experience building scalable, high-performance web applications and distributed systems using JavaScript, TypeScript, React, and Node.js. Experienced working closely with US product teams to deliver measurable improvements in performance, conversions, developer experience and product adoption.

About

I work with AI-assisted tooling as a natural part of my workflow, and bring that same pragmatic approach to everything I ship.

I take ownership of what's in front of me, stay focused on outcomes and move fast without cutting corners.

I care deeply about the craft and about the people I build with. I show up with discipline and accountability, and I do my best work in environments where quality, communication and collaboration are taken seriously.

Work Experience

? 2026 — Looking for new opportunities.

Aug 2024 — May 2026

SENIOR SOFTWARE ENGINEER AT "PINTEREST" (VIA NEARSHORE AGENCY) (remote) Aug 2024 - May 2026

Pinterest is a visual discovery engine and digital bulletin board where users find, save, and share ideas in the form of images and videos called "Pins". People use it to get inspiration for projects, discover new interests, plan events like home renovations or trips, and even find and shop for products.

- Designed and ran A/B experiments tied to data analysis to surface the most profitable advertising formats for Pinboard, driving a 30% total increase in advertiser adoption within 3 months;
- Shipped CMS integrations, layout improvements, animations and accessibility enhancements across multiple subsites, achieving a 90% Lighthouse accessibility score for WCAG-AA compliance through semantic HTML, ARIA attributes and automated a11y testing;
- Led the full migration from npm to pnpm across a large, flaky monorepo, unlocking micro-frontend architecture and per-package dependency sandboxing with independent library versions, effectively eliminating class-of build failures and easing CI/CD congestion.
- Overhauled the team's development experience and weekly release process end-to-end, transitioning from Gitflow to Trunk-Based Development and building multi-environment pipelines (preview, staging, pre-production and production) with shared artifacts, parallelization and container image reuse, cutting 30 GB of data transfer and 15 minutes per pipeline run for roughly \$1,000 in monthly savings.

Jan 2025 — Jun 2025

SENIOR SOFTWARE ENGINEER AT "BLUE YONDER" (VIA NEARSHORE AGENCY)

(remote) Jan 2025 - Jun 2025

Blue Yonder is a global leader in end-to-end digital supply chain solutions for software retailers. The company helps businesses manage the complexities and disruptions of modern supply chains.

- Contributed to a large-scale micro front-end migration spanning CI/CD pipelines, tooling upgrades and package version alignment across a distributed engineering team;
- Enhanced the internal component library by resolving bugs and improving design system consistency across the platform;
- Expanded end-to-end test coverage by ~10% across multiple system layers, strengthening overall platform reliability.

SENIOR SOFTWARE ENGINEER AT "HRIZN" (VIA NEARSHORE AGENCY)

(remote) Jun 2024 - Dec 2024

Hrzn is an AI-powered content operating system for automotive dealerships, combining LLM-driven content generation, SEO optimization and multi-channel publishing to help dealer groups build organic visibility at scale.

- Sole front-end engineer responsible for translating 50+ designer wireframes into a fully functional product, taking the platform from designs to a working beta used by automotive dealerships across the US;
- Built AI-powered features including LLM-driven content generation and automated SEO optimization, enabling dealerships to create, govern and publish search-optimized content without manual bottlenecks
- Worked directly with stakeholders through the beta cycle to continuously refine UI and UX based on real user feedback;

SENIOR SOFTWARE ENGINEER AT "PAIRTREE" (VIA NEARSHORE AGENCY)

(remote) Dec 2023 – May 2024

PairTree is an adoption enablement platform. By connecting adoption professionals, PairTree expands options for expectant moms and creates more opportunities for families pursuing private adoption.

- Translated Figma designed components into responsive web components;
- Connected responsive web components to a CMS tool (Sanity), to give autonomy to content managers;
- Reduced dependency on developers for website updates by enabling the marketing team to dynamically create new website pages through stacking of web components.

FULL-STACK SOFTWARE DEVELOPMENT (FREELANCING) AT "ÉCOLHEITA"

(remote) Jun 2021 – Jun 2024

Écolheita is a startup created with a mission to combat food waste, by offering products near their expiration date at significant discounts. Customers had the option to either pick up these items in-store or have them delivered to their homes for added convenience.

- Built a platform to combat food waste by offering discounted near-expiration products.
- Designed, developed, and launched a native mobile app, web app, and backend server.
- Delivered end-to-end solutions aligning business objectives with user experience.

Sep 2020 — Feb 2021

SENIOR FULL-STACK SOFTWARE DEVELOPER AT "QUERO EDUCAÇÃO"

(remote) Sep 2020 – Feb 2021

Quero Educação is a Brazilian educational technology (edtech) company founded in 2012, with the mission of democratizing access to education in Brazil. It operates as a large marketplace, primarily through its product Quero Bolsa, which connects students with educational institutions (higher education, basic, technical, and language courses) by offering scholarships and detailed information.

- Led the migration of a legacy PHP monolithic system to a distributed Node.js microservices architecture;
- Designed and implemented management and administration software for schools and scholarship programs;
- Oversaw technical strategy and ensure seamless transition while maintaining system reliability;
- Coordinated with stakeholders to align development with organizational objectives.

Jul 2016 — Oct 2017

SENIOR FULL-STACK SOFTWARE DEVELOPER AT "DAITAN GROUP"

(in office) Jul 2016 - Oct 2017

Daitan Group was a software development and engineering company founded in 2004, known for providing services in areas like AI, data engineering, cloud, and microservices for technology vendors.

- Migrated a monolithic Ruby on Rails application to a microservices-oriented architecture using Node.js.
- Developed a scalable, reliable portal for VMWare products.
- Integrated data from multiple commercial representatives through a CMS.
- Ensured system maintainability and performance throughout the migration process.
